RESEARCH INTEREST

The northstar of my research is finding a unified and scalable framework aligned with multi-modalities and human preferences for various vision tasks. To this end, I'm delving into 3D/4D reconstruction problems and focusing on building effective representations of the 3D world to be used in real-time for real-world problems.

- **High-dimensional vision**
  - Implicit Neural Representations
  - Gaussian Splatting
- **Generative models**
  - Diffusion models
  - Video Generation
