RESEARCH INTEREST

The northstar of my research is finding a unified and scalable framework aligned with multi-modalities and human preferences for various vision tasks. To this end, I'm delving into robot learning with multi-modal representations and focusing on building effective representations of the 3D world to be used for real-world scenarios.

- **Multi-modal representation**
 - Alignment
 - Hallucination
- **Robot learning**
 - Action modeling
 - Imitation learning
- **High-dimensional vision**
 - Spatial understanding
 - Temporal understanding
 - Motion estimation
