RESEARCH INTEREST

The northstar of my research is finding a unified and scalable framework aligned with multi-modalities and human preferences for various vision-centric tasks. To this end, I am delving into multi-modal understanding (e.g., VLM) and robot learning (e.g., VLA), focusing on building effective multi-modal representations of the 3D world to be used for real-world scenarios.

• Multi-modal representation

- Alignment [W2, P2]
- Reasoning [W2, W1, P2]
- Hallucination

• High-dimensional vision

- Spatial understanding [W2, P2, P1]
- Temporal understanding [C1, P1]
- Motion estimation [C1]

• Robot learning

- Action modeling & planning [W1]
- Imitation learning
